Pearl White

Fabric offered for Arcus, Harbour, Nero, Stratus and Tauten.

Producers of Professional Production Screens:

Material Type	Flexible Front	Edge Bending Properties	Excellent
Minimum Throw Distance	.5 x image width	Passive 3D Use	No
Peak Gain	1.0	Lay Flat Quality	Excellent
Ambient Light Resistance	Poor	Flame Retardant	Yes
Viewing Angle	160°	Acoustic Transparent	No

A pure smooth, white projector screen material with black backing. The home theatre screen surface provides an exceptionally wide viewing angle at 160° and no resolution loss at any viewing angle. The screen surface utilizes optical microgrooves and a millimicron white layer on the surface for precise image reproduction and no colour shift to create a high-definition image of the highest quality. This screen maintains an excellent depth of modulation for even the most demanding high-definition projection devices. It is a great choice for rooms with high control over ambient light, and where an exceptionally wide viewing angle is necessary.
