Producers of Professional Projection Screens

Material Type	Flexible Front	Edge Bending Properties	Excellent
Minimum Throw Distance	1.3 x image width	Passive 3D Use	Yes
Peak Gain	0.8	Lay Flat Quality	Excellent
Viewing Angle	160°	Flame Resistance	Yes
Ambient Light Resistance	Moderate	Acoustic Transparent	No

A pure smooth, gray projector screen material with black backing. With its special design gray base material and reflective surface, the Slate Gray projector screen material can provide great black levels without sacrificing the white level output to maintain a deep contrast ratio with great details and sharpness to the image. This screen surface is best used in rooms with small amounts of ambient light or where contrast levels need to be enhanced and a moderately wide viewing angle is desired.
